C. 1- PATHWAY: GLYCOSYLATION.

C. 1- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. GOLGI (POTENTIAL).

C. 1- DEVELLORMENTAL STAGE: EXPRESSED AT THE EARLY STAGE OF EMBRYONIC
BRAIN AND IS AT THE HIGHEST LEVEL AT DAY 18. IT REMAINS AT A
MODERATE LEVEL IN NEWBORN AND ADULT BRAIN.

C. 1- SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE FAMILY.

"MOLECULAR CLONING OF brain specific GDIalpha synthase (ST6GalNAC V)
CONTAINING CAG/Glutamine repeats.";
J. Biol. Chem. 274.310567-30566(1999).

I. Biol. Chem. 274.31057-30566(1999).

I. FUNCTION: INVOLVED IN THE BIOSYNTHESIS OF GANGLIOSIDE GDIA FROM GMIB. IT EXHIBITS HIGHER ACTIVITY WITH GLYCOLIPIDS THAN WITH GLYCOPROFINS.

I. PATHWAY: GLYCOSYLATION.

SUBCELLUTAR LOCATION: TYPE II MEMBRANE PROTEIN. GOLGI.

TISSUE SPECIFICITY: HIGH EXPRESSION IN FOREBRAIN AND TO A LESSER EXTENT IN CRREBELLUM. NO EXPRESSION IN SALIVARY GLAND, INTESTINE, LIVER, KIDNEY, HEARY, LUNG, THYMUS AND SPLEEN.

I. SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE FAMILY.

I. SIMILARITY: STRAIN C57BL-6J IN REF. 2 HAS ONE MORE GLUTAMINE THAN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE FROM N.A., FUNCTION, AND TISSUE SPECIFICITY.

"Novel mutations in the promoter and coding region of the human 5-HTIA receptor gene and association analysis in schizophrenia.";
Am. J. Med. Genet. 81:434-439(1998).
-!- FUNCTION: THIS IS ONE OF THE SEVERAL DIFFERENT RECEPTORS FOR 5-HYDROXYTRYPTAMINE (SEROTONIN), A BIOGENIC HORMONE THAT FUNCTIONS AS A NEUROTRANSMITTER, A HORMONE, AND A MITOGEN. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT INHIBITS ADENYLATE CYCLASE ACTIVITY.
                                                                                                     SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
STRONGEST TO THE OTHER 5HT-1 SUBTYPE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CYTOPLASMIC (POTENTIAL).
